

Daniil Voidilov

Senior iOS Engineer • Mobile Architect • API/Framework Designer

Yerevan, Armenia · voidilov@gmail.com · github.com/dankinsoid · linkedin.com/in/voidilov

PROFILE

Mobile Architect & Senior iOS Engineer with 8+ years of experience building scalable fintech and consumer apps used by millions. Strong in product thinking, architectural design, internal tooling, and API/SDK development. I design and implement full-stack mobile solutions — from UI frameworks and navigation layers to backend services, analytics, and developer tools.

Specialised in Swift, SwiftUI, UIKit, Swift Concurrency, Combine, modular architecture, design systems, API design, and Vapor backend development. Daily agent-native developer: author of an MCP server for Figma, a long-term memory system for coding agents, and agent skills automating team workflows. Author of open-source libraries with real adoption: VaporToOpenAPI (135★, 27+ projects), VimMulticursor (28k+ downloads); 68 merged PRs in external projects.

PROFESSIONAL EXPERIENCE

Tabby — Senior iOS Developer

May 2022 – Present · Dubai (remote)

Fintech app (BNPL) used by millions in the MENA region. [App Store](#)

- One of 5 engineers on the core platform team owning shared infrastructure of a 130+-module codebase built by 30+ iOS engineers across 20 feature teams; drove platform projects from proposal to rollout and adoption.
- Designed the iOS design system from zero (architecture, components, naming): 90+ reusable components, adopted in 140+ modules — the standard way teams build UI across the app.
- Automated Figma → code sync with an internal Figma plugin generating UIKit/SwiftUI code; keeps 330+ icons, 60+ color styles, and typography in sync — eliminated manual asset handoff and design drift.
- Shipped cross-stack UI components with a unified configuration layer — one implementation serving both UIKit and SwiftUI — enabling incremental SwiftUI adoption without duplicating work.
- Designed and built a new navigation layer that removed most UIKit–SwiftUI bridging friction.
- Authored internal frameworks (VDPin, VDLLayout, VDChain) adopted team-wide, cutting UI boilerplate; built a runtime UI inspector that sped up debugging and QA.
- Integrated Kotlin Multiplatform for shared business logic, set up CI pipelines, and improved module boundaries.
- Built a suite of 8 agent skills automating the team's dev workflow (Jira issues, MR creation, review triage, release cherry-picks, CI snapshot updates), integrated into everyday team process.
- Published internal documentation and tutorials (DocC, Docsify); conducted technical interviews for iOS candidates.

Copper.co — Senior iOS Developer

Aug 2020 – Jun 2021 · Moscow

Institutional crypto custody & multi-wallet platform.

- Sole iOS engineer on a new companion trading app (Mojito): delivered the full foundation from scratch — architecture, navigation, wallet infrastructure.
- Built a real-time trading dashboard with WebSocket price streaming and CoreData persistence.
- Shipped a standalone, test-covered animation framework powering SceneKit-based onboarding and UI motion.
- Expanded the custody platform's coverage beyond iOS: integrated new cryptocurrencies in TypeScript (per-currency blockchain client libraries) with Scala server-side support.

Crypterium — Senior iOS Developer

Aug 2019 – Aug 2020 · Moscow

- Integrated crypto exchange APIs and shipped finance-related UI; improved performance and reliability across key user flows.

Pochtabank — Middle iOS Developer

Sep 2018 – Aug 2019 · Moscow

- Introduced architecture into a legacy codebase that had none: designed and drove a months-long migration to MVVM + RxSwift, leaving nearly the entire app on a single testable architecture.
- Rewrote the transaction history module from scratch — noticeably faster scrolling and a maintainable structure in place of legacy code.

RosEuroBank — Junior iOS Developer

Mar 2018 – Sep 2018 · Moscow

- Shipped biometric authentication in a legacy banking app; maintained and stabilized the codebase.

OWN PROJECTS

Transfer Music — iOS app + backend

[App Store](#)

Music transfer between Apple Music, Spotify, Yandex, and others.

- Full architecture of client and backend (Vapor, Redis caching, metrics/logs infrastructure).
- WebSocket engine with dynamic batch subscriptions, paging, throttling, real-time updates.
- Support chat on Firebase Firestore with notifications, AI auto-response, developer escalation.
- Advanced debug menu: remote config, logs, keychain, UserDefaults, Firebase inspector.

Other apps: [Challenge Tracker](#) (habits), [Made Fire](#) (ambience), [UniCount](#) (scientific calculator).

OPEN SOURCE

- [ai-memory](#) — long-term memory for coding agents (Claude Code, Codex CLI): RAG with hybrid tag + vector retrieval (Qdrant), session chaining.
- [claude-talk-to-figma-mcp](#) — MCP server connecting AI agents to Figma: 40 tools, near-full plugin API coverage incl. FigJam; token engineering makes screen reads $\approx 10\times$ cheaper.
- [flutter-cljd](#) — extensive ClojureDart wrapper over Flutter's widget API.
- [swift-uinspector](#) — runtime UI inspector for iOS; works inside Xcode Previews.
- [VimMulticursor](#) — IdeaVim multi-cursor plugin, 28k+ downloads on JetBrains Marketplace.
- [VaporToOpenAPI](#) — OpenAPI specs from Vapor routes. 135★, used by 27+ projects.
- [swift-api-client](#) — flexible API client (async/await + Combine).
- [VDPin](#) — constraint builder used at Tabby; safer, simpler SnapKit alternative.
- [VDLayout](#) — declarative UIKit layout DSL.
- [VDAnimation](#) — declarative animation DSL.

PUBLICATIONS

SKILLS

- **Core:** Swift, SwiftUI, UIKit, Swift Concurrency, Combine, architecture design, design systems, UI frameworks & DSLs, performance optimisation, API design (client + backend).
- **Backend & DevOps:** Vapor, Redis, WebSockets, caching, CI/CD (GitLab CI, Fastlane), logging/metrics/monitoring (DataDog, Grafana, InfluxDB).
- **AI tooling:** MCP server design, agent skills & hooks, RAG/vector search (Qdrant, embeddings), context/token engineering, multi-agent orchestration, Anthropic/OpenAI APIs.
- **Additional:** Kotlin Multiplatform, Firebase/Firestore, Keychain & Secure Enclave, biometric auth, deep links, StoreKit/App Store Connect, debug tooling.
- **Other languages:** Objective-C, Kotlin, TypeScript, Scala (production); Clojure/ClojureDart, Dart (side projects).

EDUCATION & LANGUAGES

Bauman Moscow State Technical University — BEng & MEng, Control Systems Engineering · 2013–2019

Russian — native · English — professional working proficiency (daily working language)
